

DECIDUOUS FOLIAGE

Selkirk Scenery Company's Deciduous Foliage system is a fast and unique way to build incredibly realistic trees by representing actual leaves and branches. Bushes and trees made with this system have to be seen to be believed and they can be built fast so it doesn't take a lifetime to forest your layout.

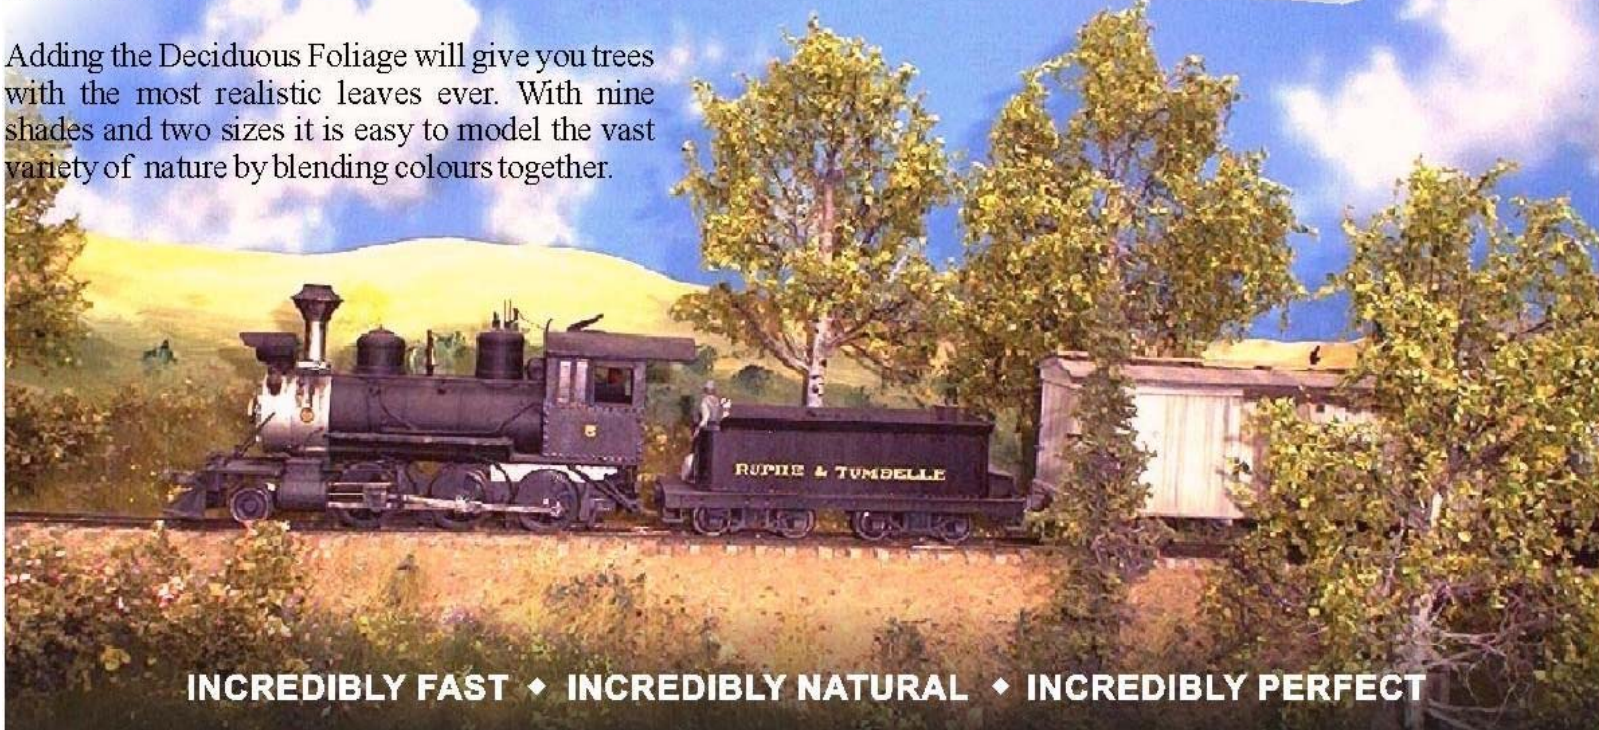

The process starts with the Branch Netting. A loose fibre like tangle it takes only a minute to apply to your tree armature. Unlike the usual poly fibre it doesn't need to be laboriously stretched and teased to look good. Once the Branch Netting is attached and spray painted it is time to bring your tree to life.

Adding the Deciduous Foliage will give you trees with the most realistic leaves ever. With nine shades and two sizes it is easy to model the vast variety of nature by blending colours together.

If you have tried Lichen, ground foam and other tree building materials and are ready for the next step in natural appearance try Selkirk Scenery Co. Once you have tried our Deciduous Foliage system we are sure you will agree that it is very realistic and versatile.

We also provide custom tinted foliage for that exact colour you need as well as bulk pricing. Contact us for details.

For great looking trees at reasonable prices call or e-mail us and welcome to the world of Selkirk Scenery Company, naturally.

INCREDIBLY FAST ♦ INCREDIBLY NATURAL ♦ INCREDIBLY PERFECT
